About: The Climate Change Task Force (CCTF) is an independent, non-governmental panel comprised of leading international climate change thinkers, scientists as well as former and current statesmen and officials working to maximize Copenhagen climate deal, “recalibrate” post Copenhagen efforts in line with latest science and actively engage civil society in the search for appropriate and adequate solutions . Under the leadership of GCI Founding President Mikhail Gorbachev, the CCTF consolidates the efforts of organizations like the Nobel Peace Laureates Forum, the Club of Madrid and the Club of Rome in bringing about urgent and radical climate action.
